GEARGRID UNVEILS INNOVATIVE SCUBA DIVE LOCKER STORAGE SYSTEMS

FOREST LAKE, MN (Nov. 18, 2008) — Extending its well-known GearGrid® line of customizable, heavy-duty storage systems designed for fast drying, secure protection of fire and rescue operation gear, GearGrid Corporation recently announced the addition of its new Scuba Dive Locker Storage System.

CEO and President Don DeMorett sees the new product's background story as key to its success. "As with so many GearGrid products, the Dive Locker System happened in response to a customer's request to modify our mobile locker to store scuba tanks and other gear," said DeMorett. "The best results happen when you satisfy customers' real needs of flexibility and performance, and that's the strength behind this system."

Available in mobile and stationary floor-mount systems, as well as wall-mount configurations, the GearGrid Dive Locker's modular design allows for a high level of customization based on individual customer needs. Wetsuits, regulators, gear bags, fins and tanks can all be safely stored based on customers' design preferences. Each of the three locker openings can accommodate up to 15 tanks, with a total locker capacity of 45 tanks. Secure doors provide added gear protection and are a standard feature, but can be omitted as customer needs dictate.

The innovative system's open-air design promotes maximum air movement, providing an ideal drying environment for wetsuits and other dive gear between use. GearGrid's signature frame of high-strength, 1¼" steel tubing and ¼" steel wire grid is finished with a tough powder-coat finish for lasting durability and performance, in a variety of standard as well as custom color options. The system is now available to diving supply shops, other retailers and individuals directly through GearGrid Corporation. Reseller and private label inquiries are welcome.

GearGrid Corporation markets its GearGrid® line of high-performance storage equipment, all manufactured in its Forest Lake, Minnesota headquarters and production facility, throughout the world. It also provides specialized solutions, including custom wire forming and fabrication for display and POP applications and OEM components, to a variety of markets and manufacturers worldwide.
